

BOM Monitoring

Intelligent platform for BOM risk management

We leverage over 50 billion data points, direct from the source, so you can make smarter decisions for the health of your BOMs.

Analytics that Empower

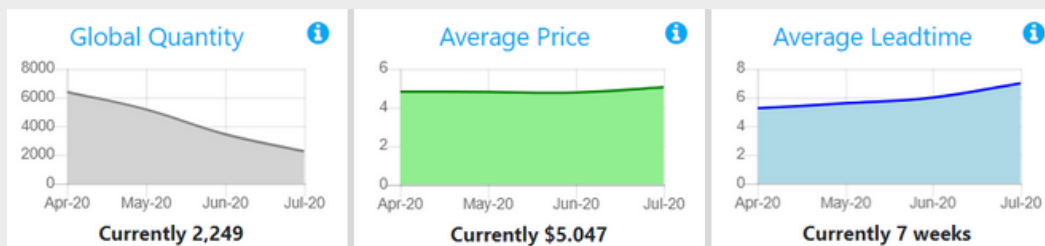

We combine advanced algorithms with 50 billion data points from thousands of component manufacturers and authorized channel partners to help supply chain leaders mitigate risk.

Stay Ahead of Risk

We monitor both allocation and obsolescence as well as provide global trending data on lead time, price, and quantity to help supply chain leaders avoid disruption.

Allocation

Interactive trending charts for every part on your BOM help you stay ahead of long lead times and other supply chain risks. Understand current market conditions before they happen and hedge against allocation.

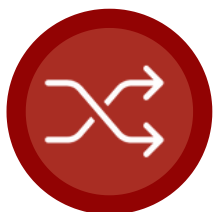

Obsolescence

We monitor for obsolescence and notify you immediately when we see a change in lifecycle status to EOL, Last Time Buy, or Obsolete.

Unique Feature: When our BOM Monitoring platform flags a component as EOL, we will buy and store 20+ years of EOL Last Time Buy inventory, direct from the manufacturer, so you don't have to.

Benefits & Features

- Dedicated BOM Specialist
- Live Chat with Your BOM Specialist
- 20 Seats Per Subscription
- Each BOM is Priced Upon Upload
- Proactive BOM Health Analysis
- Environmental Compliance
- Downloadable Reports
- Authorized Inventory & Shopping Carts
- Datasheets
- *Part Search*
- *Rapid RFQ*
- *Part Alerts*
